Job Application for Software Engineer

To the Pandora Recruitment Tam,

About Me

As a highly motivated computer professional with the enthusiasm to accept new challenges, the opportunity to work as a software engineer at your company interests me considerably. With a proven record of achievement in positions of similar scope and responsibility, I am confident that I can make an immediate contribution to the success of your company.

From 2012 to 2014 I worked as a Software Engineer Coop for the MITRE Corporation where I supported agencies in the Department of Defense by developing full prototyped systems. At MITRE each project was unique in not only the concepts but the technologies used which included Python, Ruby on Rails, Javascript, Java, PHP, MySQL and MongoDB. From 2015 to 2017 I also worked as a Software Engineer Coop for HelloWorld a digital advertising company where I conducted research into automating user interface testing to support the Quality Assurance team. I also served as the primary Software Engineer for all production based projects working with Perl, Javascript, Mysql and Python.

Currently I am working a Bachelors of Science in Computer Science with a minor in Bioinformatics and Computer Engineering. I anticipate completing the Computer Science degree by the end of June. I also will continue my education with an additional Masters in Artificial Intelligence and possibly Bioinformatics. I have also archived code samples from the majority of my projects online at GitHub, for your reference. I am positive that I can bring your company many benefits with my experience, background, and forward thinking. I look forward to hearing from you at your earliest convenience. Thank you for your consideration.

Sincerely,

Austin M. Vecchio
